

Exploratory Data Analysis (EDA) Report

Dataset: Weather Data in India (1901-2017)

Total Records: 117 Years. Columns: 13

Objective: Analyze temperature patterns and trends across India from 1901 to 2017.

Key Findings

Average annual temperature: 24.29°C

Warmest year: 2016

Coollest year: 1917

May and June are generally the hottest months while January is the coolest.

Conclusion

The dataset indicates seasonal temperature cycles and a gradual long-term warming trend. Strong correlations among adjacent months suggest consistent climatic patterns throughout the year.
